LECTURE 1: FOUNDATIONS OF QUANTUM ROMANTICS

CONCEPTS, BASES, LQS (OPERATORS), PRINCIPLE PARADOXES

NOTES

I. INTRODUCTION.

QUANTUM ROMANTICS FOLLOWS AFTER CLASSICAL ROMANTICS,

QUANTUM MECHANICS FOLLOWS AFTER CLASSICAL MECHANICS.

ROMANTICS & MECHANICS ARE SUBFIELDS OF PHYSICS,

MODELING SPECIFIC BEHAVIORS OF THE UNIVERSE:

LOVE & DESIRE IN PERSONS, FORCE & MOTION IN PARTICLES.

QUANTUM ROMANTICS & QUANTUM MECHANICS SHARE MATHEMATICS,

WITH NOTABLE EXCEPTIONS.

NOTES.

II. CONCEPTUAL OVERVIEW.

QM

SPIN

(classical) $\vec{\mu}$

$\rightarrow \mu_z = \mu \cos \theta$

$\rightarrow (\mu, +1/4)$

ACTUAL: $\mu_z = \pm \frac{1}{2} \mu_B$

\downarrow

spin- $\frac{1}{2}$

(NEW TO QM)

DISCRETE
FINITE

POSITION & MOMENTUM

(same as classical)

$\vec{x} \neq \vec{p}$

ACTUAL:

\rightarrow DISCRETE, FINITE

CANONICALLY CONJUGATE: $\Delta x \Delta p \geq \frac{\hbar}{2}$

2.1 QM REVIEW.

SPIN IS NEW (NOVEL), RELATED TO MAGNETIC MOMENT.

SPIN HAS **FINITE** POSSIBILITIES OF **DISCRETE** VALUES.

MAGNETIC MOMENT SHOULD HAVE **INFINITE** POSSIBILITIES

WITHIN A **CONTINUOUS** RANGE OF VALUES,

BUT IS **FINITE** & **DISCRETE** IN REALITY. HENCE, SPIN.

POSITION & MOMENTUM ARE (RE)NEW(ED).

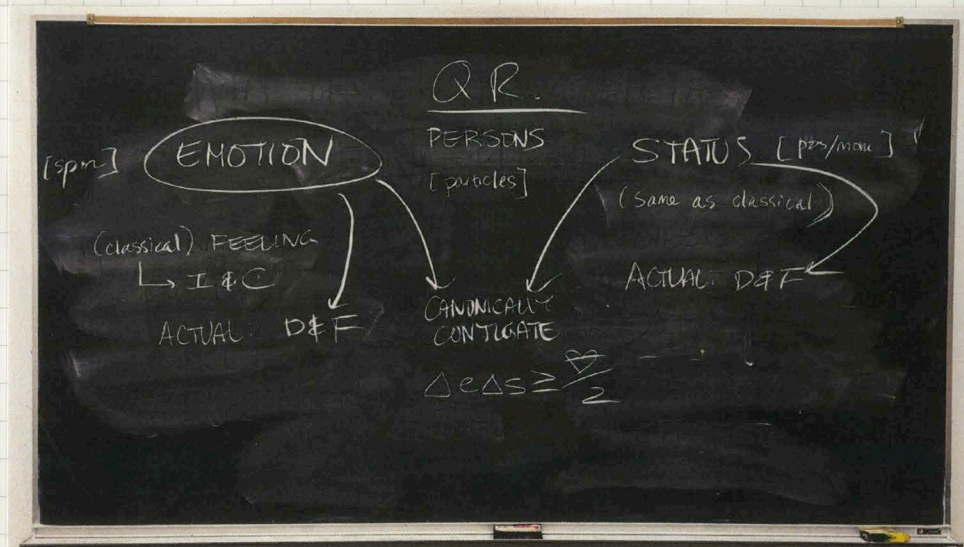

THE SAME CONCEPTS NOW HAVE **FINITE** POSSIBILITIES OF **DISCRETE** VALUES.

POSITION & MOMENTUM ARE CANONICALLY CONJUGATE:

SIMULTANEOUS KNOWLEDGE OF BOTH IS IMPOSSIBLE.

NOTES.

2.2 QM TO QR ANALOGY.

NOTES.

EMOTION IS NEW (NOVEL), RELATED TO FEELING.

EMOTION HAS **FINITE** POSSIBILITIES OF **DISCRETE** VALUES.

FEELING SHOULD HAVE **INFINITE** POSSIBILITIES

WITHIN A **CONTINUOUS** RANGE OF VALUES,

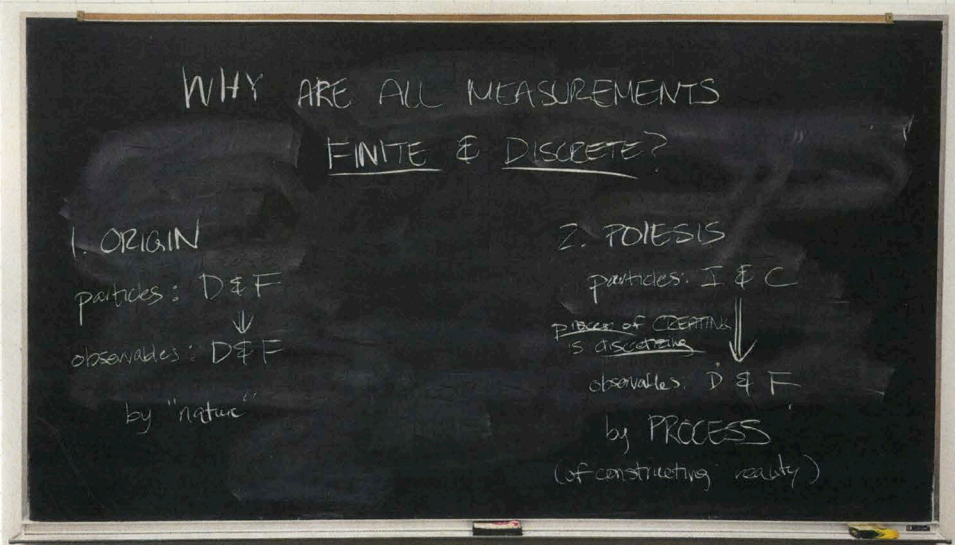

BUT IS **FINITE** & **DISCRETE** IN REALITY. HENCE, EMOTION.

STATUS IS (RE)NEW(ED).

THE SAME CONCEPT NOW HAS **FINITE** POSSIBILITIES OF **DISCRETE** VALUES.

EMOTION & STATUS ARE CANONICALLY CONJUGATE:

SIMULTANEOUS KNOWLEDGE OF BOTH IS IMPOSSIBLE.

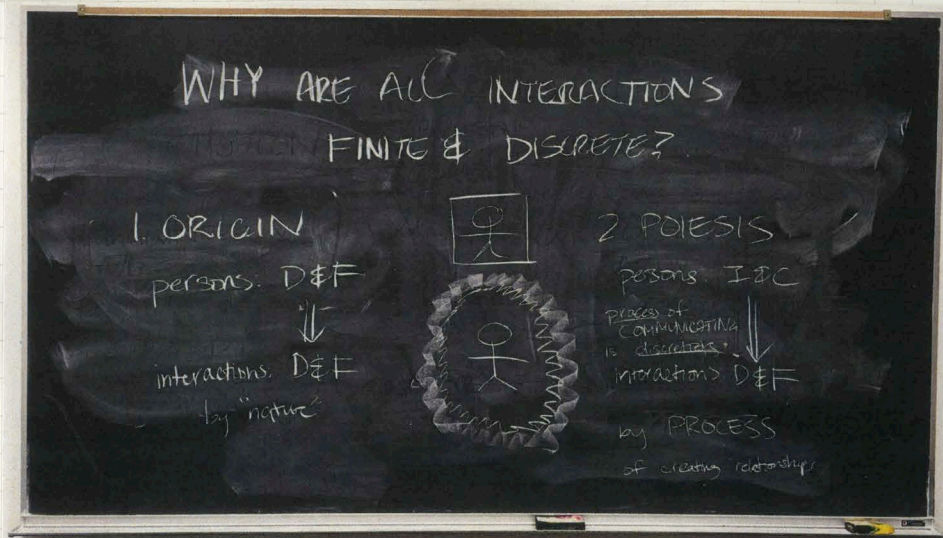

WHY IS REALITY FINITE & DISCRETE?

1. PARTICLES ARE FINITE & DISCRETE BY ORIGINAL NATURE.

2. PARTICLES EXIST IN AN INFINITE FIRMAMENT;

COMMUNICATION IS AN INHERENTLY DISCRETIZING PROCESS.

2.4 ONTOLOGICAL CAUSALITY IN QR.

IS THE TOTALITY OF MY LIVED EXPERIENCE

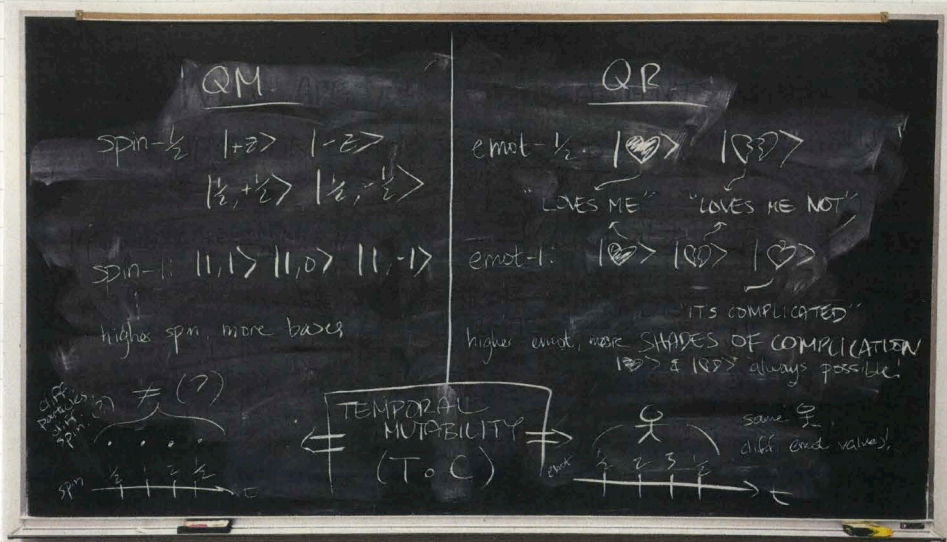

A **CONTINUOUS** & **INFINITE** THING,

ONLY IMPERFECTLY EXPRESSIBLE

THROUGH **DISCRETE** & **FINITE** EXTERNALIZATIONS?

NOTES.

III. EMOT STATE BASES.

FOR ALL EMOT VALUES, LOVES ME & LOVES ME NOT

ALWAYS FORM TWO ORTHOGONAL DIMENSIONS OF POSSIBLE MEASUREMENT.

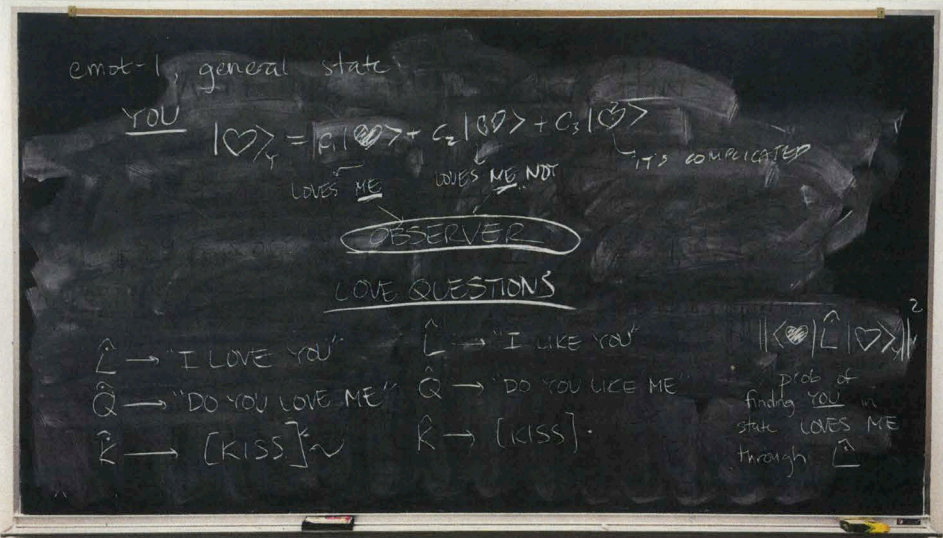

HIGHER EMOT VALUES HAVE MULTIPLE SHADES OF IT'S COMPLICATED,

SPLITTING INTO MULTIPLE ORTHOGONAL DIMENSIONS OF POSSIBLE MEASUREMENT.

EMOT VALUES CHANGE OVER TIME.

NOTES.

IV. LQS (OPERATORS IN QR).

4.1 INTRODUCTION TO LQS.

THE ONE-PERSON STATE OF YOU INVOKES ME, THE OBSERVER.

(THE CLASSICAL PARADOX OF EROS SEEPS INTO QUANTUM MATHEMATICS.)

MEASUREMENTS OF YOU ARE MADE BY ME THROUGH LOVE QUESTIONS:

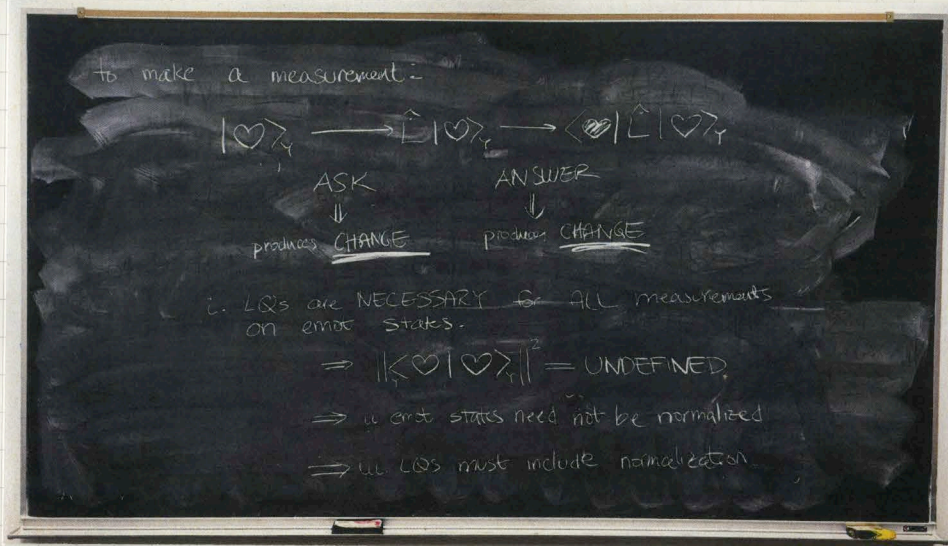

INTERACTIONS THAT TELL ME ABOUT THE EMOT STATE OF YOU.

I MODEL THE PROBABILITY OF FINDING YOU IN THE STATE LOVES ME

AS MEASURED THROUGH THE LOVE QUESTION I LOVE YOU.

NOTES:

4.2 THE PRINCIPLE PARADOX OF INTERROGATIVE NECESSITY

MEASUREMENT MUST BE MADE THROUGH AN ASKING

WHICH PROVOKES AN ANSWERING. HENCE, INTERROGATIVE NECESSITY.

THE BEING ASKED, AND THE ANSWERING, PROVOKES CHANGE.

HENCE: PARADOX.

THE IDENTITY OPERATOR IS EXPERIMENTALLY MEANINGLESS.

NOTES.

4.3 THE PRINCIPLE PARADOX OF SUBJECTIVITY.

how to define operator of \hat{L} on $|\heartsuit\rangle$?

matrix mechanics:

$$\langle\heartsuit| \rightarrow (1 \ 0 \ 0)$$

$$|\heartsuit\rangle \rightarrow \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}$$

PP.S

$$\hat{L}_{ME-Y} |\heartsuit\rangle \neq \hat{L}_{OTHER-Y} |\heartsuit\rangle$$

ME-Y OTHER-Y

$$\hat{L}_{ME-Y} = \langle\heartsuit| \hat{L}_{ME-Y} |\heartsuit\rangle$$

Diagram illustrating the operator space:

```

    graph TD
      ME[ME] -- L_ME-Y --> H[|heartsuit>]
      OTHER[OTHER] -- L_OTHER-Y --> H
  
```

FOR EVERY YOU, THERE EXISTS A UNIQUE HILBERT-SOUL SPACE

OF EMOT STATE VECTORS OF YOU.

FOR EVERY ME - YOU PAIR

EVERY OBSERVER - OBSERVEE PAIR

EVERY LOVER - BELOVED PAIR

THERE EXISTS A UNIQUE OPERATOR SPACE

OF LOVE QUESTIONS BETWEEN ME & YOU.

NOTES.

PROBLEM SET 4.1

100 pts

+15 pts extra credit

SHOW YOUR WORK!

1. (10 pts) State a comparison that analogously illustrates the concept of infinite & continuous vs. finite & discrete.

Ex. all real numbers \mathbb{R} (infinite & continuous)

vs.

a subset of integers \mathbb{Z} (finite & discrete)

2. The state of an emot-1 person, YOU, is given by

$$|\heartsuit\rangle_Y = \frac{\sqrt{2}}{2} |\heartsuit\rangle_Y + \frac{3i}{4} |\emptyset\rangle_Y + \frac{\sqrt{3}}{2} |\spadesuit\rangle_Y$$

a) (10 pts) Which of the following LQs in the operator space ME \rightarrow YOU are already normalized?

i. $\hat{L}_{M \rightarrow Y} \rightarrow \begin{pmatrix} \frac{4}{\sqrt{29}} & 0 & 0 \\ 0 & \frac{4}{\sqrt{29}} & 0 \\ 0 & 0 & \frac{4}{\sqrt{29}} \end{pmatrix}$

ii. $\hat{Q}_{M \rightarrow Y} \rightarrow \begin{pmatrix} 2i & 3 & 0 \\ 0 & 4i & 3 \\ 3 & 0 & 3i \end{pmatrix}$

iii. $\hat{K}_{M \rightarrow Y} \rightarrow \begin{pmatrix} \frac{\sqrt{2}}{3\sqrt{3}} & -\frac{2}{3\sqrt{3}}i & 0 \\ \frac{2}{3\sqrt{3}}i & -\frac{4}{3\sqrt{3}} & \frac{2}{3}i \\ 0 & -\frac{2}{3}i & \frac{2}{3\sqrt{3}} \end{pmatrix}$

2. (cont.)

- b) (10 pts) Explain when normalization would be required & how it should be implemented.

3. Consider two observers, **ALICE** & **BOB**, whose strong-L LQs in the \rightarrow **YOU** operator space are given by

$$\hat{L}_{A \rightarrow Y} \rightarrow \begin{pmatrix} \frac{2\sqrt{2}}{\sqrt{27}} & \frac{4}{\sqrt{27}}i & 0 \\ -\frac{4}{\sqrt{27}}i & \frac{2\sqrt{2}}{\sqrt{27}} & \frac{6\sqrt{2}}{\sqrt{27}} \\ 0 & \frac{6\sqrt{2}}{\sqrt{27}} & \frac{2\sqrt{2}}{\sqrt{27}} \end{pmatrix}$$

$$\hat{L}_{B \rightarrow Y} \rightarrow \begin{pmatrix} \frac{4\sqrt{2}}{\sqrt{37}} & 0 & \frac{8i}{3\sqrt{37}} \\ \frac{2\sqrt{2}}{3\sqrt{37}}i & 0 & \frac{4\sqrt{3}}{3\sqrt{37}} \\ \frac{4\sqrt{2}}{3\sqrt{37}} & \frac{4}{3\sqrt{37}} & \frac{2\sqrt{3}}{3\sqrt{37}} \end{pmatrix}$$

Use the same **YOU** state given in problem 2.

- a) (5 pts) What is the probability of **ALICE** measuring **YOU** in the state **LOVES ME** through strong-L, before **BOB** measures **YOU**?

b) (5 pts) What is the probability of BOB measuring YOU in the state LOVES ME through strong-L, before ALICE measures YOU?

c) (5 pts) What is the probability of ALICE measuring YOU in the state LOVES ME through strong-L, after BOB measures YOU through strong-L?

d) (5 pts) What is the probability of BOB measuring YOU in the state LOVES ME through strong-L, after ALICE measures YOU through strong-L?

e) (5 pts) If ALICE wants to find YOU in the state LOVES ME, should she measure YOU through strong-L before or after BOB does?

f) (5 pts) If BOB wants to find YOU in the state LOVES ME, should he measure YOU through strong-L before or after ALICE does?

g) (5 pts) Why is strong-L defined differently for ALICE & BOB?

4. Strong-L & strong-Q in the ME \rightarrow YOU operator space are given by

$$\hat{L}_{M \rightarrow Y} \rightarrow \begin{pmatrix} \frac{\sqrt{3}}{9} & \frac{4}{9} & \frac{2\sqrt{3}}{9}i \\ \frac{2\sqrt{6}}{9} & \frac{2}{3} & \frac{1}{9} \\ 0 & \frac{2}{9} & \frac{\sqrt{3}}{9} \end{pmatrix}$$

$$\hat{Q}_{M \rightarrow Y} \rightarrow \begin{pmatrix} \frac{4}{39} & \frac{20}{39\sqrt{2}}i & -\frac{20}{39\sqrt{2}}i \\ \frac{20}{39} & 0 & \frac{20\sqrt{3}}{39\sqrt{2}} \\ \frac{20}{39} & \frac{20}{39\sqrt{2}}i & \frac{4\sqrt{3}}{39\sqrt{2}} \end{pmatrix}$$

Using the same YOU state given in problem 2, what is the probability of finding YOU in the state LOVES ME through

a) (5 pts) strong-L?

b) (5 pts) strong - Q?

$$\begin{pmatrix} \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} & 0 \end{pmatrix} \rightarrow \text{strong - Q}$$

$$\begin{pmatrix} \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \end{pmatrix} \rightarrow \text{strong - Q}$$

c) (5 pts) strong - L followed by strong - Q?

d) (5 pts) strong - Q followed by strong - L?

$$\begin{pmatrix} \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} & \frac{1}{2} \end{pmatrix} \rightarrow \text{strong - Q}$$

e) (5 pts) If I want to find YOU in the state LOVES ME, which LQ(s) should I use and in what order?

5. (5 pts) Write 2-3 sentences from your perspective defending either position on ontological causality (discretization by origin or discretization by poiesis), as applied to QM, QR, or both.

EXTRA CREDIT (10 pts)

Consider the norm-factored LQ in the operator space $ME \rightarrow YOU$ given by

$$\hat{LQ}_{M \rightarrow Y} \rightarrow \begin{pmatrix} \sqrt{2} & 0 & \sqrt{3} \\ 1 & i & \sqrt{3}/2 \\ 0 & i & 0 \end{pmatrix}$$

Using the YOU state from problem 2, what would be the normalization factor? What is the matrix representation of the normalized LQ?

EXTRA EXTRA CREDIT (1-5 pts)

Name up to five other common LQs not listed
in lecture. (1 pt per valid LQ)

SUPPLEMENTARY NOTES

QUANTUM ROMANTICS.

YOU

$$|\heartsuit\rangle_Y \longrightarrow \text{"LOVES ME"} \quad \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}$$

$$|\heartsuit\rangle_Y \longrightarrow \text{"LOVES ME NOT"} \quad \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix}$$

$$|\heartsuit\rangle_Y \longrightarrow \text{"IT'S COMPLICATED"} \quad \begin{pmatrix} 0 \\ 0 \\ 1 \end{pmatrix}$$

$$|\heartsuit\rangle_Y = c_1 |\heartsuit\rangle_Y + c_2 |\heartsuit\rangle_Y + c_3 |\heartsuit\rangle_Y \quad \begin{pmatrix} c_1 \\ c_2 \\ c_3 \end{pmatrix}$$

emot-1 states.

ME

$$\hat{L}_M \longrightarrow \text{"I LOVE YOU"}$$

$$\hat{L}_M \longrightarrow \text{"I LIKE YOU"}$$

$$\hat{Q}_M \longrightarrow \text{"DO YOU LOVE ME"}$$

$$\hat{Q}_M \longrightarrow \text{"DO YOU LIKE ME"}$$

$$\hat{K}_M \longrightarrow [\text{KISS}] \sim$$

$$\hat{K}_M \longrightarrow [\text{KISS}] \cdot$$

love questions (operators).

ME \rightarrow YOU

$$\|\langle \heartsuit | \hat{L}_{M \rightarrow Y} | \heartsuit \rangle_Y\|^2 = ?$$

$$\|\langle \heartsuit | \hat{L}_{M \rightarrow Y} | \heartsuit \rangle_Y\|^2 = ?$$

$$\|\langle \heartsuit | \hat{Q}_{M \rightarrow Y} | \heartsuit \rangle_Y\|^2 = ?$$

$$\|\langle \heartsuit | \hat{Q}_{M \rightarrow Y} | \heartsuit \rangle_Y\|^2 = ?$$

$$\|\langle \heartsuit | \hat{K}_{M \rightarrow Y} | \heartsuit \rangle_Y\|^2 = ?$$

$$\|\langle \heartsuit | \hat{K}_{M \rightarrow Y} | \heartsuit \rangle_Y\|^2 = ?$$

$$\hat{L}_{M \rightarrow Y, ij} = \langle \heartsuit | \hat{L}_{M \rightarrow Y} | \heartsuit \rangle$$

measured probabilities.

PRINCIPLE PARADOXES OF QR.

1. THE PRINCIPLE PARADOX OF INTERROGATIVE NECESSITY. (PP. IN)

$$\|\langle \text{love} | \text{love} \rangle\|^2 = \text{UNDEFINED}$$

(the identity operator is experimentally meaningless.)

- i. LQs are necessary for ALL measurements of emot states.
- ii. emot states need not be normalized.
- iii. asked states must be normalized before calculating probability.

2. THE PRINCIPLE PARADOX OF SUBJECTIVITY. (PP. IN)

QUANTUM SEMIOTICS.

Q. MECHANICS.

Q. ROMANTICS.

(Q.) REALITY.

ONTOLOGICAL CAUSALITY.

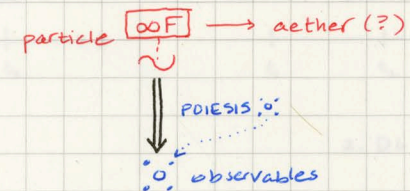

WHY IS REALITY \circ AND \circ ?

QM.

1. DISCRETIZATION BY ORIGIN.

2. DISCRETIZATION BY POIESIS.

QR.

1. DISCRETIZATION BY ORIGIN.

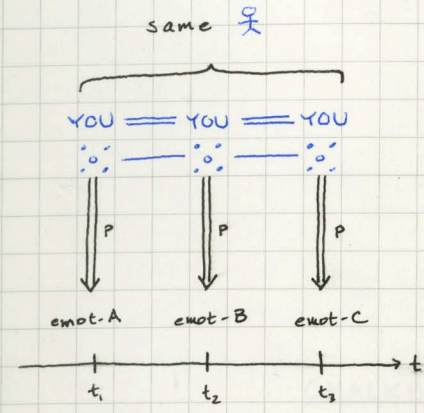

2. DISCRETIZATION BY POIESIS.

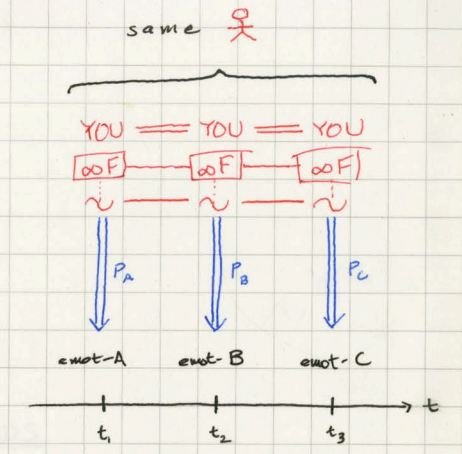

TEMPORAL MUTABILITY (THEORY OF CHANGE).

QR.

1. DbO.

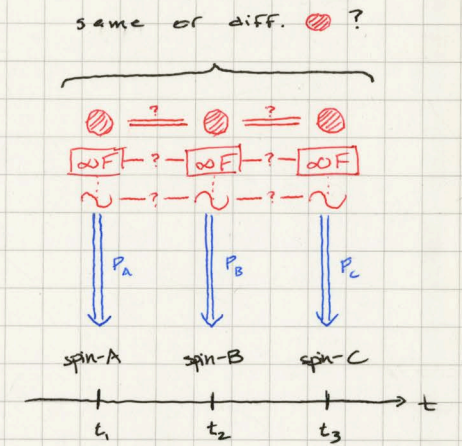

2. DbP.

QM.

1. DbO.

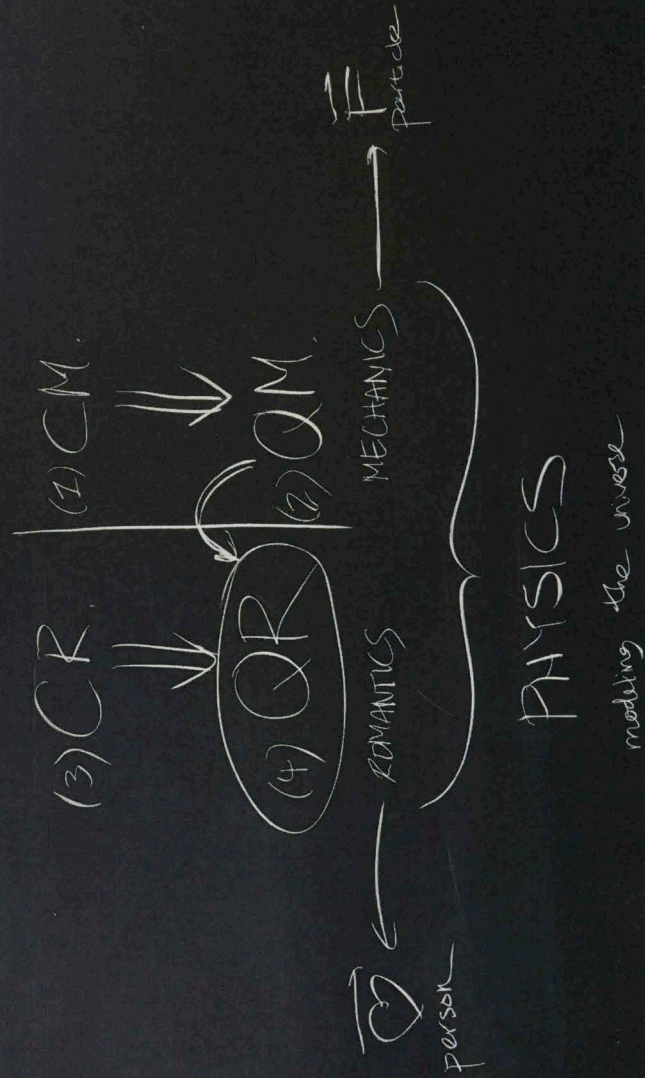

2. DbP.

LOVE QUESTIONS

2011-11-11

→ "DO YOU LOVE ME?"

$$\frac{[Kiss]^2}{N} \uparrow$$

^ I → "I LIKE YOU"

Q → "DO YOU LIKE ME?"

Prob of
finding you in
state LOVES ME
through $\hat{\rho}$

to make a measurement:-

$$|\psi\rangle_Y \xrightarrow{\text{ASK}} \hat{L}|\psi\rangle_Y \rightarrow \langle \psi | \hat{L} | \psi \rangle_Y$$

ASK

ANSWER

↓

produces CHANGE

produces CHANGE

i.e. LQs are NECESSARY for ALL measurements on ent states.

$$\Rightarrow \|\langle \psi | \psi \rangle_Y\|^2 = \text{UNDEFINED}$$

\Rightarrow ent states need not be normalized

\Rightarrow all LQs must include normalization

how to define operator of \hat{L} on $|\psi\rangle_Y$?

matrix mechanics:

$$\langle \psi | \rightarrow (1 \ 0 \ 0)$$

$$|\psi\rangle_Y \rightarrow \begin{pmatrix} c_1 \\ c_2 \\ c_3 \end{pmatrix}$$

$$\hat{L}_{M \rightarrow Y} \rightarrow \begin{pmatrix} \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y & \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y & \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y \\ \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y & \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y & \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y \\ \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y & \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y & \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y \end{pmatrix}$$

$$\hat{L}_{M \rightarrow Y} = \langle \psi | \hat{L}_{M \rightarrow Y} | \psi \rangle_Y$$

PP.S

$$\hat{L}_{M \rightarrow Y} |\psi\rangle_Y \neq \hat{L}_{O \rightarrow Y} |\psi\rangle_Y$$

ME → YOU

OTHER → YOU
